

APLICACIÓN DE EJEMPLO - NEWSLETTER

Un endpoint DELETE /newsletter para darse de baja.

```
def handler(event, context):
    params = event.get("queryStringParameters", {})
    email = params.get("email", "")
    token = params.get("token", "")
    secret = settings.UNSUBSCRIBE_SECRET
    email_and_secret = f"{email}{secret}".encode()
    hashed_email_and_secret = hashlib.md5(email_and_secret).hexdigest()
    if token != hashed_email_and_secret:
        logger.error("Token is invalid")
        response = {"message": "Token is not valid."}
        return {"statusCode": 400, "body": json.dumps(response)}

    table = dynamodb.Table(os.environ["DYNAMODB_TABLE"])
    table.delete_item(Key={"email": email})
    return {"statusCode": 204, "body": None}
```

APLICACIÓN DE EJEMPLO – NEWSLETTER

Un endpoint DELETE /newsletter para darse de baja.

```
functions:
  unsubscribe:
    handler: serverless.handler.unsubscribe
    events:
      - http:
          path: unsubscribe
          method: delete
```
